△
example time

user presses & holds

MM + linear menu pops up

user drags to make selection, mouse up = select

Button

fast way

mark over menu button selects from MM only

extension

linear menu

start point

A

B

mm
+
linear menu pops
up
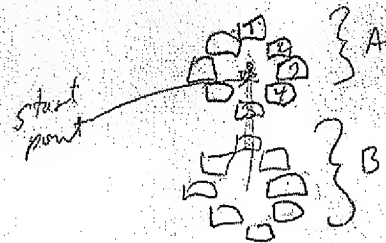

user
drags
to make
selection,
mouse up =
select

button
from MM
only

Alternative: 2 mm

start
point

} A
} B

item 5
– may have to be null
– no! use a point to label
   to select scheme

what about marking?
how do you get to items
   in menu B?

← what does this select?

the problem is the menu selection
scheme is now "point to label"
so the marks are in the linear
domain
So mark selection of record menu
is undefined
Could tell the user
selects into the menu
but performance with hurt

} long port
½ long port
